#### **FEATURES**

- –55°C to +125° C operation
- 16 TO 40 VDC input
- · Four fully regulated outputs
- Internal EMI filter meets MIL-STD-461C CE03
- · Active transient suppressor
- · Built in hold-up function with flag
- · Fully isolated
- Magnetic feedback
- Fixed frequency, 550 kHz typical
- Topology Single Ended Forward
- · Inhibit function
- · Indefinite short circuit protection
- Undervoltage lockout

## **DC/DC CONVERTERS 28 VOLT INPUT**

### **MQO SERIES** 16 WATT

# MQ0285150

#### MODELS VDC OUTPUT

QUAD ±5 and ±12 +5 and +15

Size (max.): 3.200 x 2.600 x 0.460 inches (81.28 x 66.04 x 11.68 mm) See Section B8, case N, for dimensions. Weight: 120 grams typical

Screening:

Standard or ES. See Section C2 for screening options, see Section A5 for ordering information.

#### DESCRIPTION

The MQO Series<sup>™</sup> of DC/DC converters supply up to 16.5 watts in a four output configuration of ±5 and ±12 or ±5 and ±15 VDC. An integral EMI filter and transient suppressor allow the converters to meet MIL-STD-461C standards without external components. An output hold-up feature provides a low power flag and full output power hold-up through transient dropout conditions.

The MQO Series converters are packaged in hermetically sealed cases and are rated for full power operation from –55° to +125° C case temperature. This makes these units ideal for military, aerospace, and hi-rel industrial applications.

A high gain bandwidth magnetically isolated control loop is used to precisely regulate the +5 VDC output. Constant frequency pulse width with a single ended forward topology is used. The -5 VDC output and the auxiliary outputs are independently controlled with low headroom regulators, eliminating cross regulation errors. The use of feedforward, compensation, and a high gain bandwidth control loop provides excellent rejection to the conducted audio spectrum of MIL-STD-704A-D and MIL-STD-461C.

#### INTEGRAL EMI FILTER

The MQO Series includes a a built-in EMI filter and transient suppressor which allow the units to meet the most common military standards without any external components. The internal EMI filter provides both differential and common mode attenuation on the

input power lines to allow meeting the CE03 interference and CS02 susceptibility requirements. The active internal transient suppressor provides protection against MIL-STD-704A, 1275, and 461C line transients. Protection is provided for transients up to 400 V from a 0.5 ohm source and 600 V from a 50 ohm source.

#### **BUILT-IN HOLD-UP FUNCTION WITH FLAG**

An output hold-up feature provides a low power flag and full output power hold-up through transient drop out conditions. At full load for a Vin step from 28 to 0 volts, the minimum hold-up time will be 50  $\mu s.$  The low power flag (TTL high) is asserted 10  $\mu s$  before the end of the hold-up time. External capacitance can be added to extend hold-up time.

#### SHORT CIRCUIT PROTECTION

MQO Series converters provide predictable current limiters which directly sense output load current in the converter's secondary. During short circuit or overload conditions, the current limiters provide constant output current and an input power fold-back.

#### UNDERVOLTAGE LOCKOUT

Undervoltage lockout prevents the converters from operating below approximately 12 VDC input voltage which helps keep system current levels smooth, especially during initialization or re-start operations.
