DESCRIPTION

This specification is applied to the following TFT Liquid Crystal Display Module with Back-light unit.

General Specifications

• Type name

: TX38D55VM1AAA

· Display Area

: $H304.1 \times V228.1$ [mm]

Display Pixels

: $H1024 \times V768$ pixels

(Display Dots)

 $(H(1024\times3)\times V768 \text{ [dots]})$

• Power Supply Voltage : 3.3 V

• Pixel Pitch

: $H0.297 \times V0.297$ [mm]

· Color Pixel Arrangement: R·G·B Vertical Stripe

· Display Mode

: Transmissive &

Normally White Mode

· Color Number

: 262k Colors

· Viewing Direction : 12 O'clock (Note1)

Dimensions Outlines

: H330.0 typ. \times V260.0 typ. \times t17.0 typ. [mm]

• Weight

: 1300 tvp. [g]

• Interface

: 1ch-LVDS / Receiver (Note2)

Surface Polarizing Film: Glare Polarizing Film

(Hard Coat 3H : Pencil Hardness)

• Back-light

: Four Cold Cathode Fluorescent Lamp

(Side-Light type: Upper and Lower)

Back-light inverter is not

contained in Module.

Note1) Viewing Direction: Less inversion of gray scale.

2) LVDS: Low Voltage Differential Signaling.

Hitachi Displays, Ltd.	Date	Nov. 06, 2006	Sh. No.	3284PS 2603-TX38D55VM1AAA-3	Page	3-1/2
------------------------	------	---------------	------------	-----------------------------	------	-------

· Caution :

- (1) This product is supposed to be used in the air-conditioned room where sunshine does not directly come in.
- (2) Please do not use this product to such application as needs high reliability and safety. in function. (Ex. Medical Equipment, Life Support System, and Safe for Property etc.)
- (3) There might be some change in the Product and Specs without notice.Please confirm them beforehand when you need maintenance parts.
- (4) In case of Failure due to HITACHI's Responsibility, it could be repaired or replaced for free within guarantee. Failure due to Customer's responsibility (including Customers' repair by themselves) could not be repaired and replaced even within guarantee.
- (5) The content of these sheet might be changed for some improvement without notice.

 Please be advised with Sales to make sure when you design equipment using this product.
- (6) Please contact with Sales if there is any question in regard to these sheet.

1. ABSOLUTE MAXIMUM RATINGS

1.1 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS

ITEM	OPERATING		S	TORAGE	UNIT	NOTE	
1 I LUM	MIN.	MAX.	MIN. MAX.		UNII	NOTE	
Ambient Temperature	-20 70		-30 70		${\mathcal C}$	1)	
Humidity	2)		2)		%RH	1)	
Vibration	_	4.9 (0.5G)	_	19.6 (2G)	m/s ²	3)	
Shock	_	29.4 (3G)	_	490 (50G)	III / 32	4)	
Corrosive Gas	NOT ACCEPTABLE		NOT ACCEPTABLE		_		
Illuminance at LCD surface		50,000	_	50,000	1 x		

Note 1) Temperature and Humidity should be applied to the glass surface of a TFT module, not of system installed with this unit. Operating temperature means functional temperature without regard to optical performance.

Life characteristic is specified at 25 ± 5 degree.

At low temperature the brightness of CFL drop and the life time of CFL become to be short. (especially below 0 degree)

Storage at low temp

2) Ambient temp.

temp : 48hr max. Ta≤40°C : 85%RH MAX. without condensation

Ta>40%: Absolute humidity must be lower than the

saturated vapor of 85%RH at 40℃, without condensation

3) Vibration frequency

: 20~50Hz. (Except resonance frequency)

4) 3ms, $X \cdot Y \cdot Z \cdot Z'$.

1.2 ELECTRICAL ABSOLUTE MAXIMUM RATINGS

(1) TFT LIQUID CRYSTAL DISPLAY MODULE

VSS=0V

ITEM	SYMBOL	MIN.	MAX.	UNIT	NOTE
Power Supply Voltage	VDD	0	4.0	V	
Input Voltage for logic	VI	-0.2	VDD+0.2	V	1)
Electrostatic	VESD0	±100		V	2), 3)
Durability	VESD1	±	8	kV	4), 5)

- Note 1) It is applied to pixel data signal and clock signal.
 - 2) Electric discharge constant $200 \,\mathrm{pF} 0\,\Omega$, $25\,\mathrm{C} 70\,\mathrm{KH}$.
 - 3) The I/F Connector pins are subjected.
 - 4) Electric discharge constant $200 \,\mathrm{pF} 250 \,\Omega$, $25 \,\mathrm{C} 70 \,\mathrm{WRH}$.
 - 5) The Surface of Metal bezel and LCD are subjected.

(2) BACK-LIGHT UNIT

GND=0V

ITEM	SYMBOL	MIN.	MAX.	UNIT	NOTE
Lamp Current	Ιι	0	7	mArms	1)
Lamp Voltage	Vı	0	1500	Vrms	2)

- Note 1) At Lamp start-up time.
 - 2) The specification is applicable to connector pins of Back-Light unit.

1.3 Connection between System Ground and Metal frame.

Metal frame of the module shold be grounded

with Customor's system ground in case that protection film

is being peeled off while operating the module.

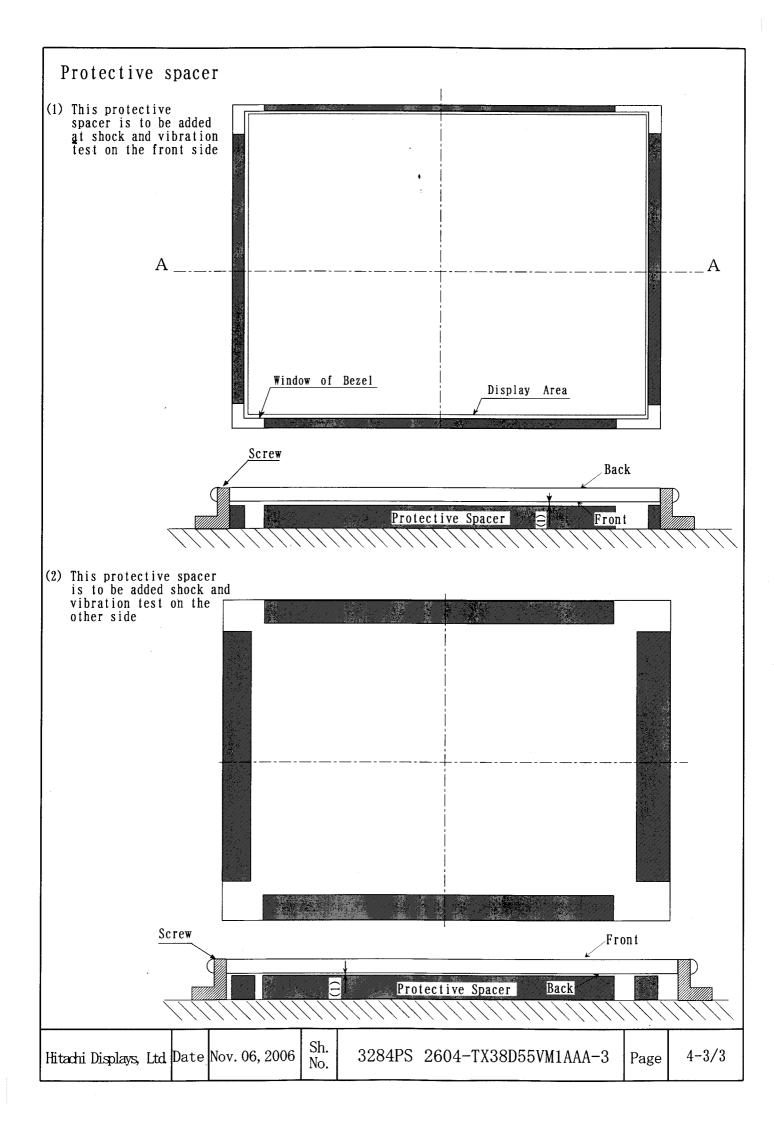

Unless you connected between metal frame and System Ground.

Machine's system happen to shut down due to the influence

of electrostatic discharge coused by pealing off

the protection film.

Hit	chi Displays,	Ltd.	Date	Nov. 06, 2006	Sh. No.	3284PS 2604-TX38D55VM1AAA-3	Page	4-2/3
-----	---------------	------	------	---------------	------------	-----------------------------	------	-------

2. OPTICAL CHARACTERISTICS

The following items are measured on the conditions that this unit operation (TFT panel and Back-light) and measuring systems are stable. (more than 30minites' operation)

The ambient light excluding The Back-light unit is nothing.

· Measuring equipment : TOPCON BM-7, Prichard 1980A, or equivalent

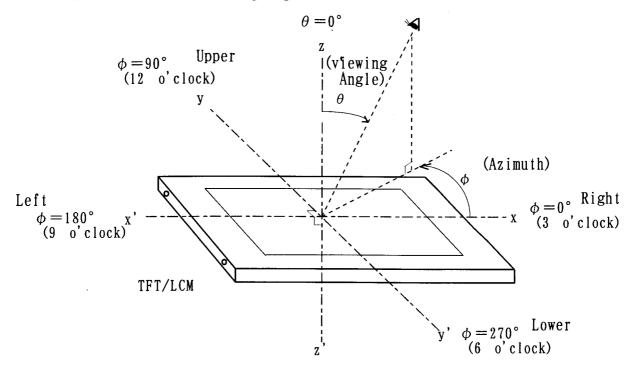

Measuring point : Active area center

Temperature of LCD= $25\pm3\%$, VDD=3.3V, fv=60Hz, fL=50kHz, IL=6mArms

				I		I

Hitachi Displays, Ltd. Date Nov. 06, 2006	Sh. No.	3284PS 2605-TX38D55VM1AAA-3	Page	5-1/2
---	------------	-----------------------------	------	-------

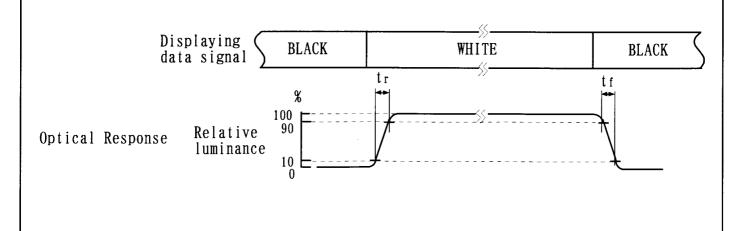

Note 1) Definition of Viewing Angle

Note 2) Definition of Contrast Ratio (CR)

CR = Brightness when displaying White raster
Brightness when displaying Black raster

Note 3) Definition of Response Time

Hitachi Displays, Ltd Date Nov. 06, 2006	Sh. No.	3284PS 2605-TX38D55VM1AAA-3	Page	5-2/2
--	------------	-----------------------------	------	-------

3. ELECTRICAL CHARACTERISTICS

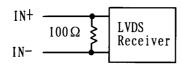

(1) TFT LIQUID CRYSTAL DISPLAY MODULE

 $Ta=25^{\circ}C$, Vss=0V

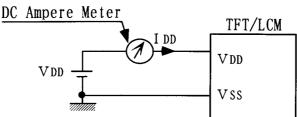

ITEM	SYMBOL	MIN.	TYP.	MAX.	UNIT	NOTE			
Power Supply Voltage	V _{DD}	3. 0	3. 3	3.6	V				
Differential Input Voltage	Hi	VIH	_	_	+100	mV.	1)		
for LVDS Receiver Threshold	Lo	VIL	-100			mV	1)		
Power Supply Current		I dd	_	0.4	0.65	A	2),3)		
Frame Cycle Frequency		f v		60	-	Hz	4),5)		
Line Cycle Frequency		fн		48.3	-	kHz	4)		
DCLK Frequency	DCLK Frequency		60	65	68	MHz	4)		

Note 1) VCM=+1.25V

VCM is common mode voltage of LVDS transmitter/receiver. The input terminal of LVDS transmitter is terminated with 100Ω .

2) fv=60Hz, fclk=65MHz, Vdd=3.3V, DC Current.
Typical value is measured when displaying vertical 64 gray scale.
Maximum is measured when displaying Vertical-stripe (Black-Gray 7).

- 3) As this module contains 0.8A fuse, prepare current source that is enough for cutting current fuse when a truble happens. (larger than 2.0A.)
- 4) For LVDS Transmitter Input
- 5) Vertical Frequency is encouraged to be used by 60Hz.

 The flicker level changes by the gap of the vertical frequency.

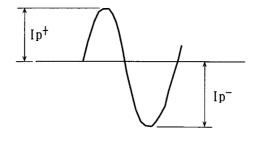

Hitachi Displays, Ltd.	Date	Nov. 06, 2006	Sh. No.	3284PS 2606-TX38D55VM1AAA-3	Page	6-1/2
------------------------	------	---------------	------------	-----------------------------	------	-------

(2) BACK-LIGHT UNIT

 $Ta=25^{\circ}C$, GND=0V

·٢	ITEM	SYMBOL	MIN.	TYP.	MAX.	UNIT	NOTE
	Lamp Current	IL	3.0	6. 0	6.5	mArms	1),2)
	Lamp Voltage	V_L		620	_	Vrms	7)
Γ	Frequency	fL	40	_	70	kHz	3)
Γ	Starting Lamp		1170	_	_	Vrms	Ta=25°C 4),5)
	Voltage	Vs	1370	_	_	VIIIS	Ta=-10°C 4),5)

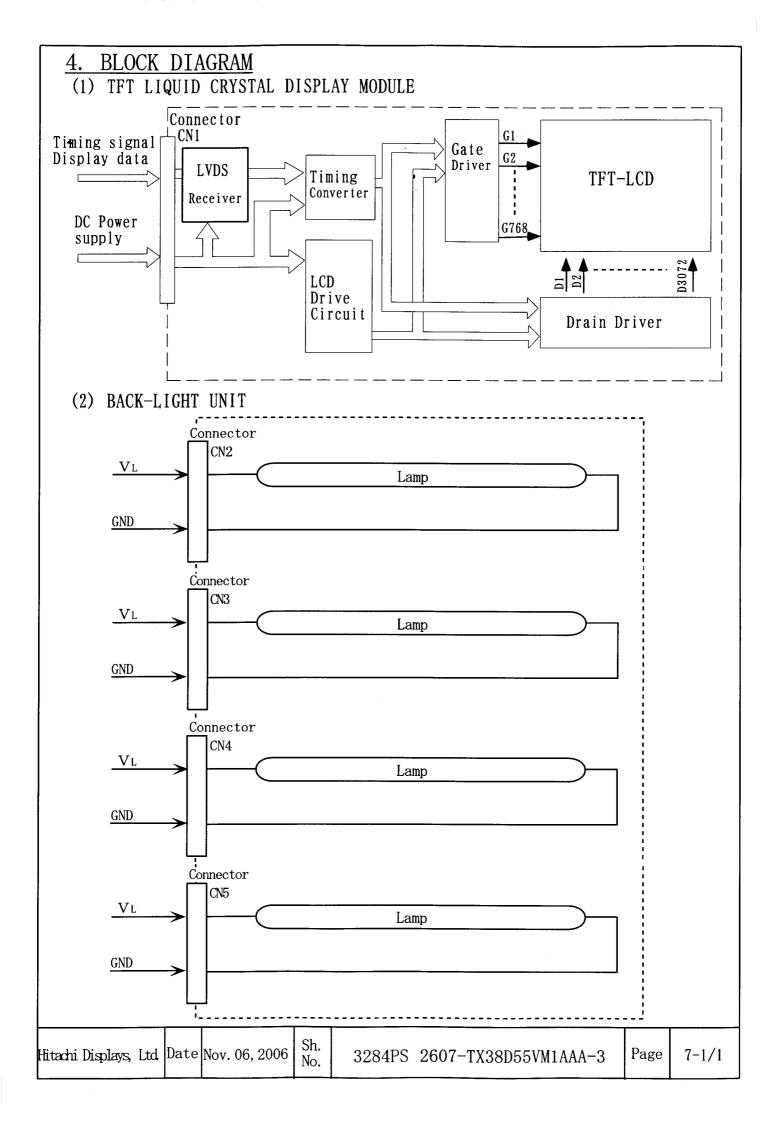

- Note 1) IL is Current of GND side.
 - 2) Higher IL cause the short life time of CFL.
 - 3) Lamp frequency may produce interference with Hsync frequency, causing beat or flicker on the display.
 - 4) Starting Lamp Voltage should be more than Vs (Min).
 - 5) Invertor open output voltage please makes the design which 1 seconds or more can be continued at least. When it is below that, there are times when the lamp dose not light up.
 - 6) Quality of the invertor produces big effect on illumination efficiency and life of back light. When it arranges the invertor, that back light and flicker etc. the illumination malfunction of back light does not occur, we request verification. In addition, as for verification as much as possible we recommend that it executes when it is close to the apparatus. In addition, as for the invertor, overvoltage, use you ask those which have the safe protection circuit such as the overcurrent inspection circuit and the discharge corrugated inspection circuit.
 - 7) IL=6mArms
 - 8) Distribution difference of lamp surface temperature should be less than 5°C.
 - 9) When the lighting wave form of the inverter is asymmentry, the inclination of mercury is generated. Therefore, please adjust the unbalance (|Ip⁺-Ip⁻|/Irms×100%) of the lighting current wave form to 10% or less, and adjust the wave high rate (Ip⁺ (or Ip⁻)/Irms) to 1.2~1.63.

Invertor current wave form.

10) Recommendation invertor : HITACHI LIGHTING, Ltd.

Type name: INVC759 suitable item

5. INTERFACE PIN CONNECTION

(2) timing converter timing
(Input timing for transmitter)

The timings except mentiond above are referd to the specifications of your transmitter.

Hitachi Displays, Ltd Date Nov. 06, 2006 Sh. No. 3284PS 2609-TX38D55VM1AAA-3 Page 9-2/4

	Item	Symbol	Min.	Typ.	Max.	Unit
DCLK	Cycle time	t clk	14.8	15.4	_	ns
	Line cycle time	t _H	1180	1344	2400	t clk
DTMG	Line width-Active	t Hd	1024	1024	1024	
DIMG	Frame cycle time 1)	t v	771	806	1000	line
	V width-Active	t vd	768	768	768	1 ine

NOTE 1) It counts by a typical value of line cycle time.

Hitachi Displays, Ltd. Date Nov. 06, 2006 Sh. No. 3284PS 2609-TX38D55VM1AAA-3 Page 9-3/4

(3) TIMING BETWEEN INTERFACE SIGNAL AND POWER SUPPLY

Power Supply, Input Signal and Backlight Voltage ON/OFF/REENTRY should comply with the following sequence.

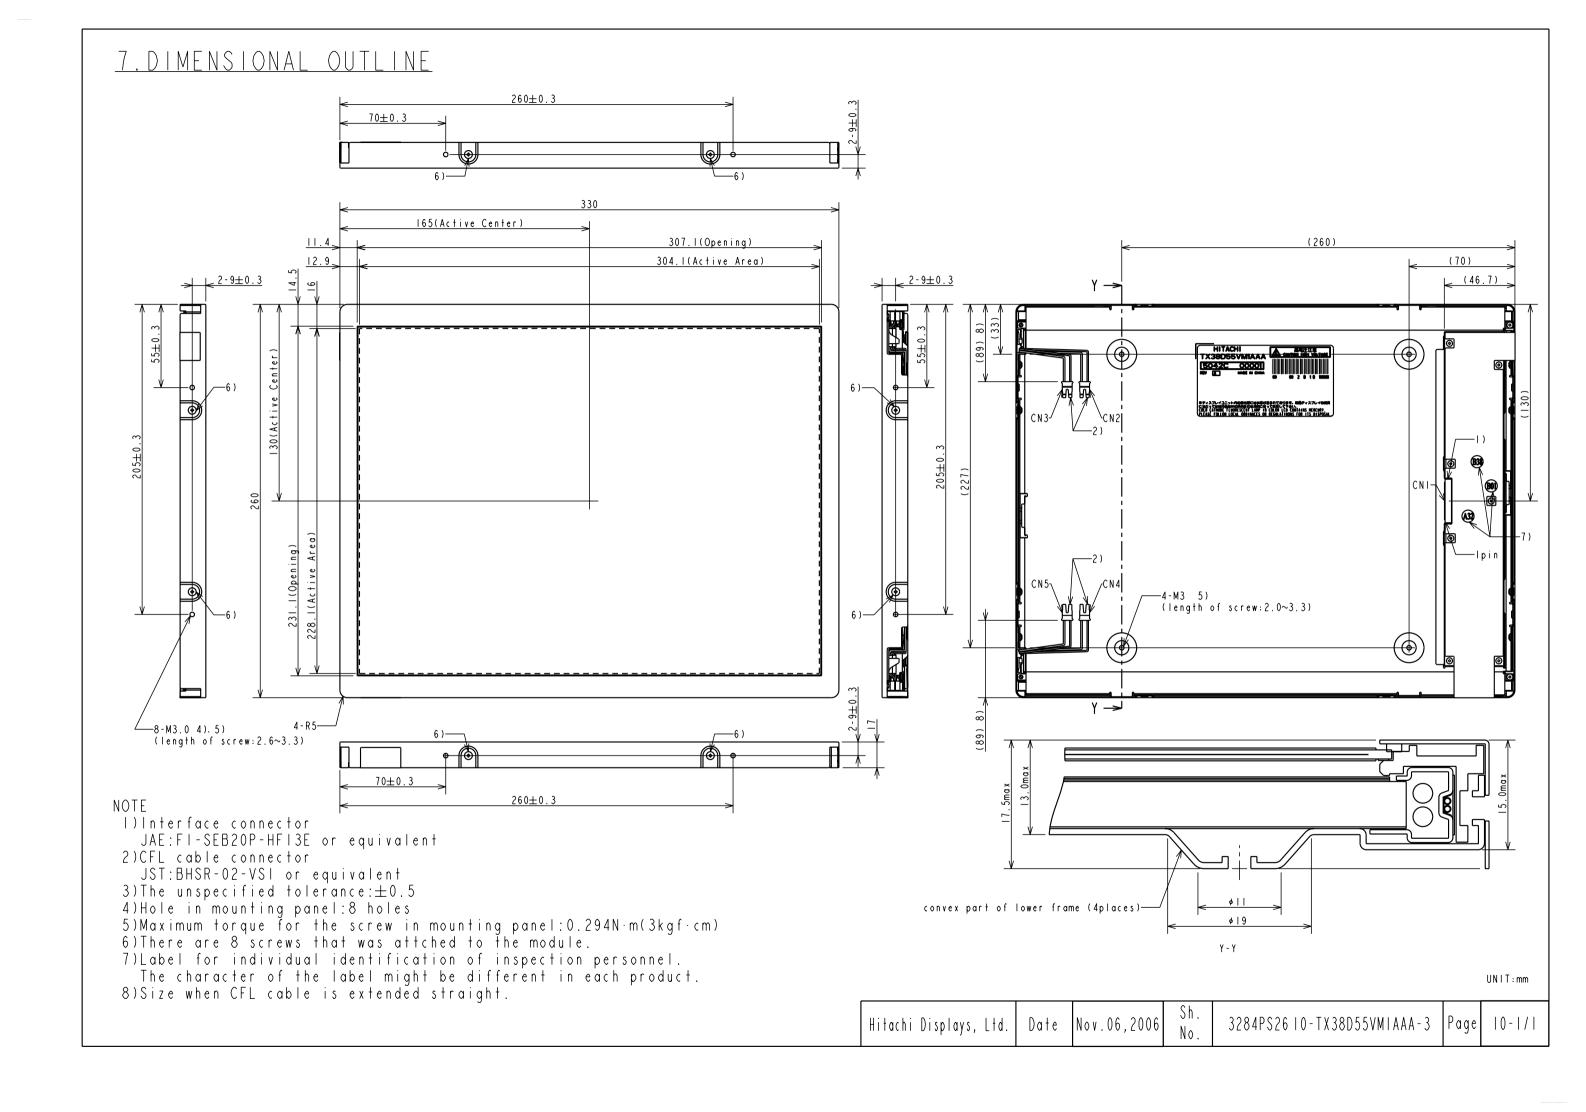

- Note(1) In order to prevent electronic parts from destruction caused by latch-up, please input signal after Power Supply Voltage ON. In addition, please turn off signals before Power Supply Voltage OFF.
 - (2) In order to prevent from function error due to residual charge, please reenter Power Suplly Voltage after time stipulated with t7.

 $500 \text{ms} \leq t7$

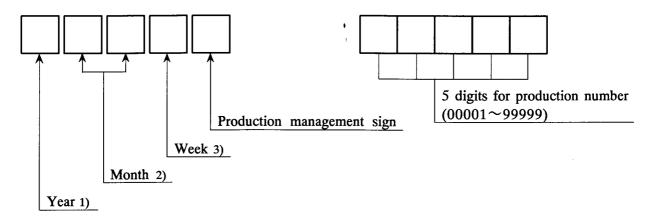

(3) Please turn on Backlight after signals fix and turn off before signals down, otherwise noise appears in the display. The noise cause no problem with display performance in case of timing sequence comply with the spec.

3)

8.2 Revision (REV.) control

REV. is the column for manufacturing convenience. A-Z except I and O may be written on this column.

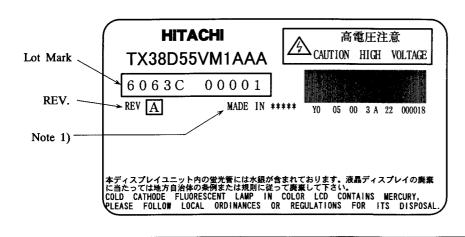

8.3 Location of lot mark

Lot mark is printed on a label. The label is on the metallic bezel as shown in

7. DIMENSIONAL OUTLINE

The style of character will be changed without notice.

2)

Note 1) Indication of place of origin (***** section)

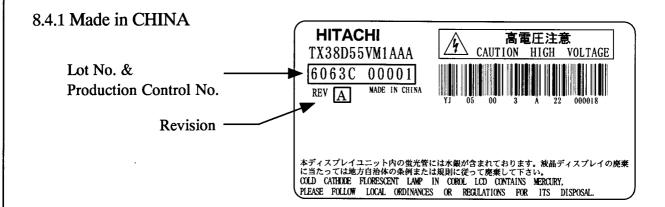

CHINA
JAPAN
TAIWAN

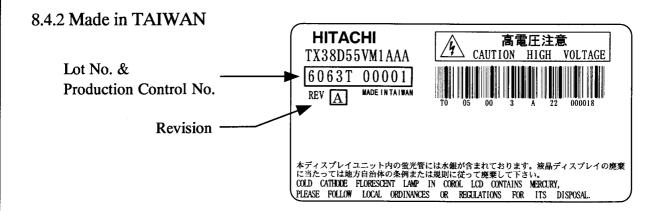

Hitachi Displays, Ltd. Date	Nov. 06, 2006	Sh. No.	3284PS 2611-TX38D55VM1AAA-3	Page	11-1/2	
-----------------------------	---------------	------------	-----------------------------	------	--------	--

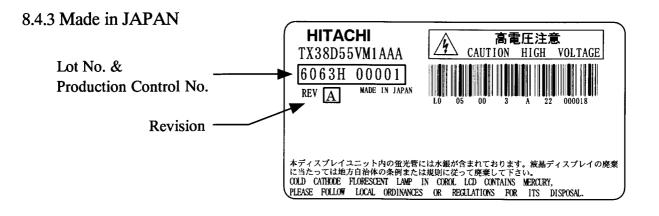

8.4 EX. indication of place of origin

Label is attached on the back side of module.

The items menstioned change without notice.

Hitachi Displays, Ltd. Date Nov. 06, 2006 Sh. No. 3284PS 2611-TX38D55VM1AAA-3 Page 11-2/2

9. COSMETIC SPECIFICATIONS

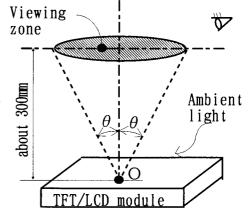

9.1 CONDITIONS FOR COSMETIC INSPECTION

(1) Viewing zone

i) The figure shows the correspondence between eyes (of inspector) and TFT/LCD module.

 $\cdot \theta \le 15^{\circ}$ when non-operating inspection $\cdot \theta \le 5^{\circ}$ when operating inspection

ii) Inspection should be executed only from front side, and only A-zone. Cosmetic of B-zone and C-zone are ignored. (refer to 9.2 DEFINITION OF ZONE)

(2) Environmental

i) Temperature : 25℃

When operating inspection, surface temperature of

LCD panel is 25℃.

ii) Ambient light: More than 2000 [1x] and non-directive.

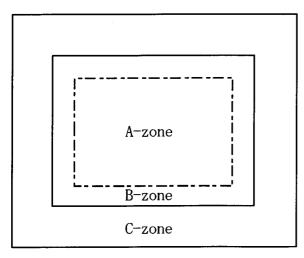

iii) Back-light : When non-operating inspection, Back-light should

be off.

(3) Operating inspection

Operating inspection should be done with 8 color mode (without gray scale).

9. 2 DEFINITION OF ZONE

• A-zone : Display area (pixel area).

· B-zone : Area between A-zone and

C-zone.

· C-zone : Metal bezel area.

(Include I/F connector)

9.3 COSMETIC SPECIFICATIONS

When displaying condition is not stable (ex. at turn on or off), the following specifications are not applied.

	No.]	Item				Max.acceptable number A-zone	Unit	Note
Operating	1	Dot defect		1-dot		dot	5	pcs	1),2),4)
inspection			Spa	parkle 2-dots		dots	2

10. PRECAUTIONS

Please pay attention to the followings when you use this TFT/LCD module with Back-light unit.

10.1 MOUNTING PRECAUTION

- (1) You must mount Module using mounting holes arranged in 8 corners tightly.
- (2) You should consider the mounting structure so that uneven force (ex. twisted stress) is not applied to Module.

 And the case which Module is mounted should have sufficient strength so that external force is not transmitted directly to Module.
- (3) To improve the strength of module against the mechanical shock the space between module and the case should be $0.3 \sim 3.0 \text{mm}$.

- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chloline type materials for the cover case are not desiable because the former generate corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub by dustclothes with chemical treatment.

 Do not touch the surface of polarizer with bare hand or greasy close. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials chamois soaked petrolium benzin. IPA(Iso-Propyl Alcohol) is recommended for cleaning the adhesives used to attach front /rear polarizers. Do not use acetone, toluen and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits have not sufficient strength.
- (10) Use fingerstalls of soft gloves in order to keep clean display quality, when you handle the device for incoming inspection and assembly.
- (11) Do not pull or do not fold the CFL cable.

Hitachi Displays, Ltd Date	Nov. 06, 2006	Sh. No.	3284PS 2613-TX38D55VM1AAA-3	Page	13-1/4
----------------------------	---------------	------------	-----------------------------	------	--------

10.2 OPERATING PRECAUTION

- (1) Response time depends on the temperature. (In lower temperature, it becomes longer).

 And also Transmittance and Color depend on the temperature.
- (2) Brightness depends on the temperature. (In lower temperature, it becomes lower).

 And in lower temperature, response time (required time that brightness is stable after turn on) becomes longer.
- (3) Optical characteristics (eg. luminance, uniformity, color coordinate etc.) gradually change by operating condition, especially low temperature change faster, because LCD module has Cold Cathode Fluorescent Lamp.
- (4) Be careful for condensation at sudden temperature change. Condensation make damage to polarizer or electrical contact part. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed at long times, afterimage is likely to occur.
- (6) The Module have high frequency circuit. If you need to shield the electromagnetic noise, please do in yours.
- (7) When Back-light unit is operating, it sounds. If you need to shield the noise, please do in yours.
- (8) Please connect the Back-light connector to the inverter circuit directly. The long cable between CFL and the inverter may cause the brightness drop of CFL and may cause the rise of starting lamp Voltage(Vs). In addition, it causes CFL life to shorten.
- (9) Do not connect or remove the module from main system with power applied.

10.3 ELECTROSTATIC DISCHARGE CONTROL

- (1) Since Module is composed with electronic circuit, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through list band etc.. And don't touch I/F pin directly.
- (2) When the polaraizer protection film is peeled off, electrostatic discharge occurs. Please peel it off slowly.

10.4 PRECAUTION FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

Hitachi Displays, Ltd.	Date	Nov. 06, 2006	Sh. No.	3284PS 2613-TX38D55VM1AAA-3	Page	13-2/4
------------------------	------	---------------	------------	-----------------------------	------	--------

10.5 Precaution to strage

- When modules for replacement are stored for a long time, following precautions should be taken care of:
- (1) For preventing the liquid crystal deterioration with the ultraviolet ray, please retain when by all means it is inserted in the Hitachi shipping box.
- (2) When it cannot retain in the Hitachi shipping box, Modules should be stored in a dark place.

 It is prohibited to apply sunlight or fluorescent light during storage.
- (3) The surface of polarizers should not come in contact with any other object. It is recommended that modules should be stored in the Hitachi shipping box.
- (4) Modules should be at 5 to 35 at normal humidity (60%RH or less).
- (5) Please follow to the environmental condition of statement in the page 4-1/3 of CAS excluding the long term strage.

10.6 HANDLING PRECAUTIONS FOR PROTECTIVE FILM

- (1) When the protective film is peeled off, static electricity is generated between the film and the polarizer.

 This film should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protective film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protective film against the polarizer during the time you peel off the film, the glue is apt to remain more on the polarizer. So please carefully peel off the protective film without rubbing it against the polarizer.
- (3) When the Module with protective film attached is stored for long time, sometimes there remains a very small amount of glue, still on the polarizer after the protective film is peeled off. Please refrain from storing the Module at the high temperature and high humidity for glue is apt to remain in these condition.
- (4) The Glue may be taken for the Modules failure, but you can remove the Glue easily.

 When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with IPA (Iso-Propyl Alcohol).

- 10.7 SAFETY

- (1) If Module is broken, be careful to handle not to injure. (TFT/LCD and Lamp are made of glass.)

 Please wash hands sufficiently when you touch the liquid crystal coming out from broken LCDs.
- (2) As Back-light unit has high voltage circuit internal, do not open the case and do not insert foreign materials in the case.

10.8 Environmental protection

- (1) The LCD Modules include Cold Cathode Fluorescent Lamp(CFL). CFL contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
- (2) Printed circuits board used in a module contain small amount of lead below RoHS regulation value.

 Please follow local ordinance or regulations for its disposal.
