

# Video signal switcher for AV amplifiers

## BA7625

The BA7625 is a video signal switch that contains two five-channel analog multiplexers and wide-band 6dB amplifiers. It is designed for use in video cassette recorders. By simply adding transistor buffers to the outputs, it is possible to construct a record / playback switch for two record / playback VCRs, and three video playback machines (eg. laser disk players). Input switching and VCR record switching can be done independently. The BA7625 has sync-tip clamp inputs which are ideal for switching video signals.

### ●Applications

AV amplifiers and video selectors

### ●Features

- |                                 |                             |
|---------------------------------|-----------------------------|
| 1) 5-input / 3-output switches. | 3) Built-in 6dB amplifiers. |
| 2) Sync-tip clamp inputs.       | 4) 5V supply voltage.       |

### ●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V <sub>cc</sub>	9	V
Power dissipation	P <sub>d</sub>	500*	mW
Operating temperature	T <sub>opr</sub>	- 25 ~ + 70	°C
Storage temperature	T <sub>stg</sub>	- 55 ~ + 125	°C

\* Reduced by 5mW for each increase in Ta of 1°C over 25°C.

●Block diagram

●Truth table

A	B	E	Monitor OUT
L	L	*	IN1
H	L	*	IN2
L	H	*	IN3

Note 1: Connect a distortion meter to the output, and input a  $f = 1$  kHz sine wave. Adjust the input level until the output distortion is 0.5%.

This output voltage at this time is the maximum output level  $V_{om}$  (V<sub>P-P</sub>).

Note 2: Input a 1V<sub>P-P</sub>, 1MHz sine wave. The voltage gain (in dB) is given by  $G_v = 20 \log (V_{OUT} / V_{IN})$ .

Note 3: Input a 1V<sub>P-P</sub>, 4.43MHz sine wave. The interchannel crosstalk (in dB) is given by  $CT = 20 \log (V_{OUT} / V_{IN}) + 6$ .

Note 4: Input 1V<sub>P-P</sub>, 1MHz and 10MHz sine waves. The frequency characteristic (in dB) is given by  $G_f = 20 \log (V_{OUT} (f = 10\text{MHz}) / V_{OUT} (f = 1\text{MHz}))$ .

Note 5: Input a 1V<sub>P-P</sub>, 4.43MHz sine wave. The mute level is given by  $CTM = 20 \log (V_{OUT} / V_{IN}) + 6$  (dB).

Note 6: Input a 1V<sub>P-P</sub>, 1MHz sine wave. Reduce the CTL pin voltage from  $V_{CC}$ .

The CTL pin switching level ( $V_{TH}$ ) is the CTL pin voltage at which the  $V_{OUT}$  level drops below 10mV<sub>P-P</sub>.
