

## High Performance *ActivePSR™* Primary Switching Regulator

### FEATURES

- Patented Primary Side Regulation Technology
- No Opto-Coupler
- Best-in-Class Constant Voltage, Constant Current Accuracy
- Low EMI
- Proprietary Fast Startup Circuit
- Built-in Soft-Start Circuit
- Integrated Line and Primary Inductance Compensation
- Integrated Programmable Output Load Resistance Compensation
- Line Under-Voltage, Output Over-Voltage, Output Short-Circuit and Over-Temperature Protection
- Complies with all Global Energy Efficiency and CEC Average Efficiency Standards
- Adjustable power from 2W to 7W
- Minimum External Components
- Tiny SOT23-6 Package

### APPLICATIONS

- Chargers for Cell Phones, PDAs, MP3, Portable Media Players, DSCs, and Other Portable Devices and Appliances
- RCC Adapter Replacements
- Linear Adapter Replacements
- Standby and Auxiliary Supplies

### GENERAL DESCRIPTION

The ACT361 belongs to the high performance patented *ActivePSR™* Family of Universal-input AC/DC off-line controllers for battery charger and adapter applications. It is designed for flyback topology working in discontinuous conduction mode (DCM). The ACT361 meets all of the global energy efficiency regulations (CEC, European Blue Angel, and US Energy Star standards) while using very few external components.

The ACT361 ensures safe operation with complete protection against all fault conditions. Built-in protection circuitry is provided for output short-circuit, output over-voltage, line under-voltage, and over temperature conditions.

The ACT361 *ActivePSR™* is optimized for high performance, cost-sensitive applications, and utilizes Active-Semi's proprietary primary-side feedback architecture to provide accurate constant voltage, constant current (CV/CC) regulation without the need of an opto-coupler or reference device. Integrated line and primary inductance compensation circuitry provides accurate constant current operation despite wide variations in line voltage and primary inductance. Integrated output load resistance compensation further enhances output accuracy. The ACT361 achieves excellent regulation and transient response, yet requires less than 150mW of standby power.

The ACT361 is optimized for 2W to 7W applications. It is available in space-saving 6 pin SOT23-6 package.

## PIN DESCRIPTIONS

PIN	NAME	DESCRIPTION
1	SW	Switch Drive. Switch node for the external NPN transistor. Connect this pin to the external power NPN's emitter. This pin also supplies current to VDD during startup.
2	G	Ground.
3	BD	Base Drive. Base driver for the external NPN transistor.
4	VDD	Power Supply. This pin provides bias power for the IC during startup and steady state operation.
5	FB	Feedback Pin. Connect this pin to a resistor divider network from the auxiliary winding.
6	CS	Current Sense Pin. Connect an external resistor ( $R_{CS}$ ) between this pin and ground to set peak current limit for the primary switch. The peak current limit is set by $(0.396V \times 0.9) / R_{CS}$ . For more detailed information, see Application Information.
