SMT POWER INDUCTORS

Round Wire Coils - PG0871NL series

Current Rating: up to 28Apk

Inductance Range: 0.46uH to 10.5uH

Height: 6.4mm Max

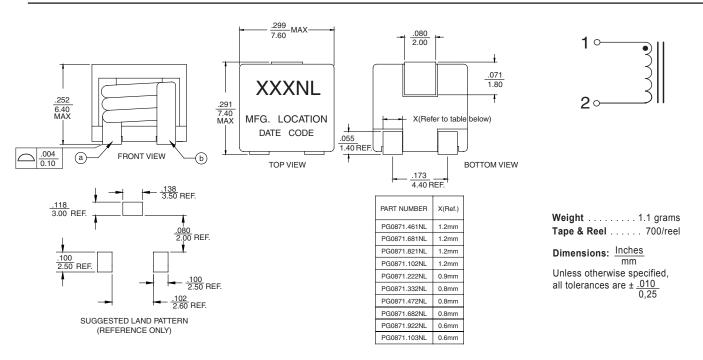

• Footprint: 7.6mm x 7.4mm Max

No Thermal Aging

Electrical Specifications @ 25°C — Operating Temperature -40°C to +130°C $^{ m 1}$

Schematic

SMT POWER INDUCTORS Round Wire Coils - PG0871NL series

NOTES FROM THE TABLE:

- 1. Actual temperature of the component during system operation(ambient plus temperature rise) must be within the standard operating range.
- Inductance at Irated is a typical inductance value for the component taken at rated current.
- The rated current as listed is either the saturation current (@ 25°C) or the heating current depending on which value is lower.
- The DCR of the part is measured at an ambient temperature of 20°C±3°C from point a and b as shown below on the mechanical drawing.
- 5. The saturation current, Isat, is the current at which the component inductance drop by 20% (typical) at an ambient temperature of 25°C. This current is determined by placing the component in the specified ambient environment and applying a short duration pulse current (to eliminate self-heating effect) to the component.
- The heating current, Idc, is the DC current required to raise the component temperature by approximately 40°C. The heating current is determined by mounting the component on a typical pcb and applying current for 30 minutes. The temperature is measured by placing the thermocouple on top of the unit under test. Take note that the components'

- performance varies depending on the system condition. IT is suggested that the component be tested at the system level, to verify the temperature rise of the component during system operation.
- Core loss approximation is based on published core data:

Core Loss = K1 * (f)1.324 * (\Delta B)2.422 in mW

K1 = 71.56 E-4

ΔB = K2 * Vusec in mT

f = switching frequency in MHz

K1 & K2 = core loss factors

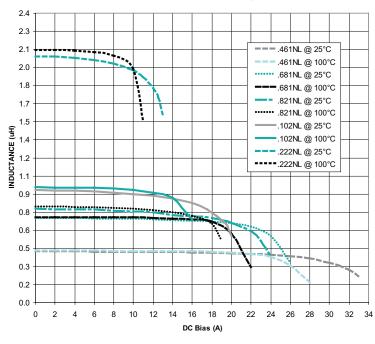

V = Voltage across the component in V

Vusec = V * D / f

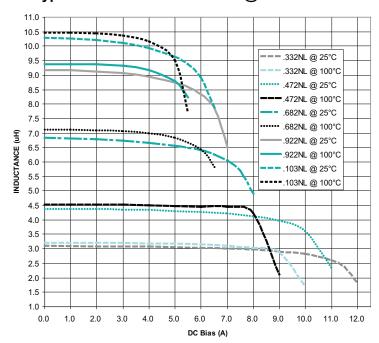

D = Duty cycle

- 8. Unless otherwise specified, all testing is made at 100kHz, 0.1Vac
- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PG0871.222NL becomes PG0871.222NLT). Pulse complies to industry standard tape and reel specification EIA481. The tape and reel for this product has a width(W=16.0mm), pitch(Po=12.0mm) and depth (Ko=6.8 mm).

Typical Inductance vs DC Bias @25°C and 100°C

Typical Inductance vs DC Bias @25°C and 100°C
