

# 16bits Stereo Audio DAC Integrated Headphone Driver with Volume Control

## FEATURES

- Operation range: 2.7V~6.5V
- Volume control range : 6dB to -39dB, 1.5dB/step
- Low power consumption, 17mW at V<sub>DD</sub>=3.3V (Audio code = 0000H)
- Mute function
- Flexibility power management
- No pop-noise
- No zero crossing distortion
- Audio format : Right justified, I<sup>2</sup>S
- Serial control interface : I<sup>2</sup>C, SPI
- Output voltage adjusted by the external resistors
- Excellent Power Supply Rejection Ratio(PSRR)
- Component less
- Cost effective
- Housed in SSOP20(MS6334), SSOP16, QFN16 package

## APPLICATIONS

Multimedia system, MP3, PDA, Portable Digital Audio.

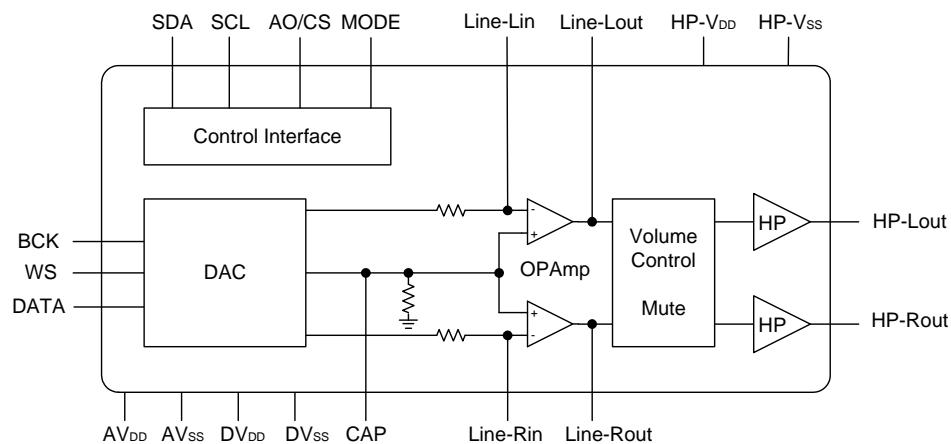

## DESCRIPTION

The MS6334 is a 16-bits voltage-output Digital-to-Analog Converter (DAC) integrated class AB stereo headphone driver with volume control. It is fabricated in a CMOS process and features extremely low power dissipation, small package size and easy application. The accuracy of the matched coarse current sources, combined with the unique symmetrical decoding method, preclude zero-crossing distortion and ensures high quality audio reproduction.

The MS6334 has good feature for portable equipment, these features include the low voltage operation, low power consumption, flexible power management, component less and small package SSOP20, make the MS6334 ideally suited for use in portable digital audio equipments.

The MS6335 only has I<sup>2</sup>C interface, the smaller package SSOP16, QFN16 , and other functions are the same as the MS6334.

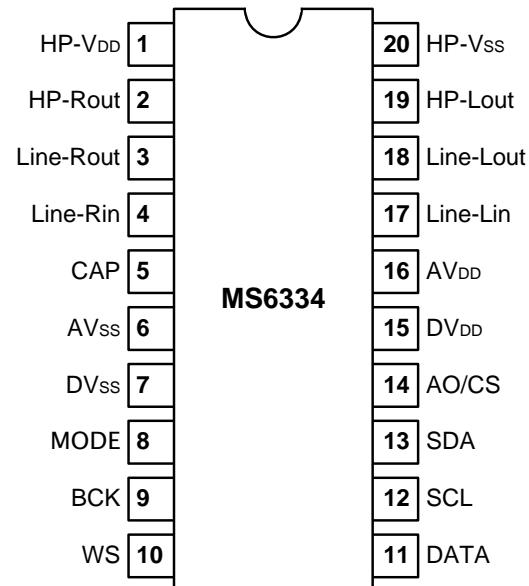

## BLOCK DIAGRAM

## PIN CONFIGURATION

MS6334

Symbol	Pin	Description
HP-V <sub>DD</sub>	1	Headphone supply voltage
HP-Rout	2	Right channel headphone output
Line-Rout	3	Right channel line output
Line-Rin	4	Right channel line input
CAP	5	Capacitor connected
AV <sub>SS</sub>	6	Analog ground
DV <sub>SS</sub>	7	Digital ground
MODE	8	Control interface selection Low : I <sup>2</sup> C, High : SPI
BCK	9	Audio bit clock input
WS	10	Audio word select input
DATA	11	Audio data input
SCL	12	I <sup>2</sup> C clock input SPI clock input
SDA	13	I <sup>2</sup> C data input SPI data input
AO/CS	14	I <sup>2</sup> C address option SPI chip select
DV <sub>DD</sub>	15	Digital supply voltage
AV <sub>DD</sub>	16	Analog supply voltage
Line-Lin	17	Left channel line input
Line-Lout	18	Left channel line output
HP-Lout	19	Left channel headphone output
HP-V <sub>SS</sub>	20	Headphone ground

SSOP20, I<sup>2</sup>C / SPI interface

Note: 1. MODE = low, the interface is I<sup>2</sup>C and pin14 is address option (AO).

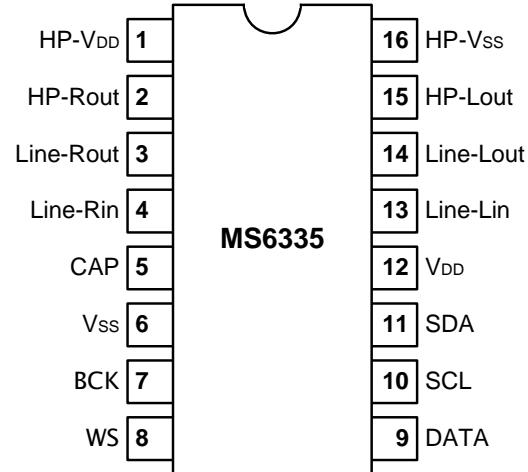

AO = low, the address code is 8CH (10001100B).

AO = high, the address code is 88H (10001000B).

2. MODE = high, the interface is SPI and pin14 is chip selection (CS).

## MS6335

Symbol	Pin	Description
HP-V <sub>DD</sub>	1	Headphone supply voltage
HP-Rout	2	Right channel headphone output
Line-Rout	3	Right channel line output
Line-Rin	4	Right channel line input
CAP	5	Capacitor connected
V <sub>SS</sub>	6	Ground
BCK	7	Audio bit clock input
WS	8	Audio word select input
DATA	9	Audio data input
SCL	10	I <sup>2</sup> C clock input
SDA	11	I <sup>2</sup> C data input
V <sub>DD</sub>	12	Supply voltage
Line-Lin	13	Left channel line input
Line-Lout	14	Left channel line output
HP-Lout	15	Left channel headphone output
HP-V <sub>SS</sub>	16	Headphone ground

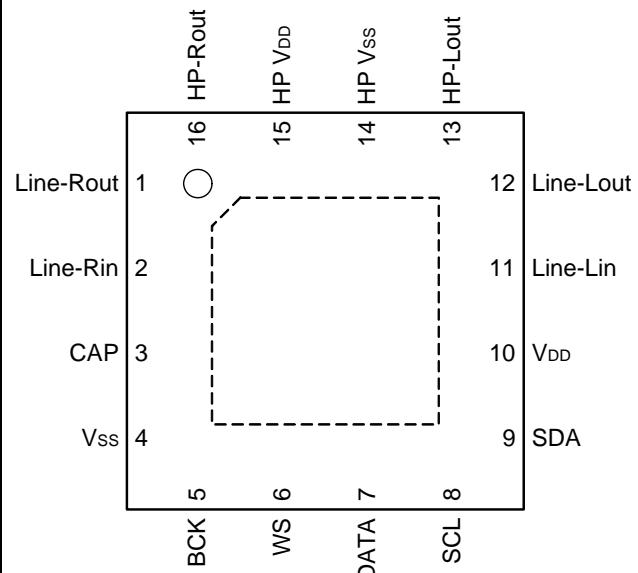

SSOP16, I<sup>2</sup>C interface

Note: The control interface is I<sup>2</sup>C only. The address code is 8CH (10001100B).

## MS6335

Symbol	Pin	Description
Line-Rout	1	Right channel line output
Line-Rin	2	Right channel line input
CAP	3	Capacitor connected
V <sub>SS</sub>	4	Ground
BCK	5	Audio bit clock input
WS	6	Audio word select input
DATA	7	Audio data input
SCL	8	I <sup>2</sup> C clock input
SDA	9	I <sup>2</sup> C data input
V <sub>DD</sub>	10	Supply voltage
Line-Lin	11	Left channel line input
Line-Lout	12	Left channel line output
HP-Lout	13	Left channel headphone output
HP-V <sub>SS</sub>	14	Headphone ground
HP-V <sub>DD</sub>	15	Headphone supply voltage
HP-Rout	16	Right channel headphone output

QFN16, I<sup>2</sup>C interface

Note: The control interface is I<sup>2</sup>C only. The address code is 88H (10001000B).

**AUDIO TIMING AND FORMAT**

The MS6334 accepts input serial data formats of 16-bit word length. Left and right data words are time multiplexed. The MSB must always be first.

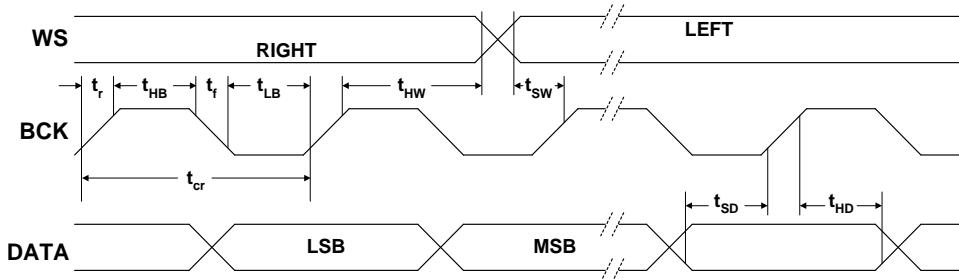

Fig.1 Timing of input signals

**Audio data format (BCK, WS, DATA)**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit

## I<sup>2</sup>C BUS INTERFACE

### I<sup>2</sup>C interface protocol

The format consists of the following

- A START condition
- A chip address byte including the chip address. (7bits)
- The 8<sup>th</sup> bit of the byte must be “0”.(write=0, read=1)
- The chip must always acknowledge the end of each transmitted byte.
- A data sequence (N-bytes + Acknowledge)
- A STOP condition

Initial state: b0=b1=0. Power off : V<sub>DD</sub> down to 0V

### I<sup>2</sup>C example

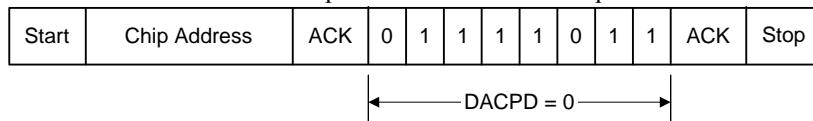

The audio format is selected I<sup>2</sup>S format. Audio format code = 81H.

The initial state is right justified format.

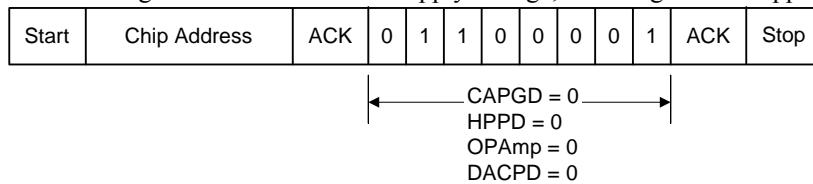

DAC active. Code = 7BH.

The initial state is enabled all power down mode when power on.

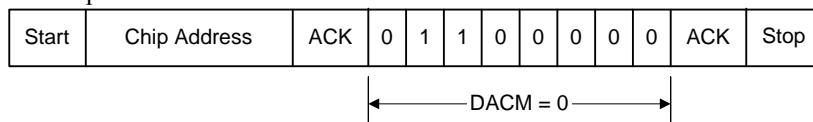

HP active, OPAmp active, CAP to 1/2 V<sub>DD</sub>, DAC keep active. Code = 61H.

Set the voltage of CAP to middle of supply voltage, the charge time is approximately 1 second.

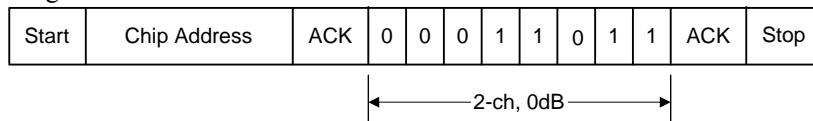

DAC mute off. Code = 60H.

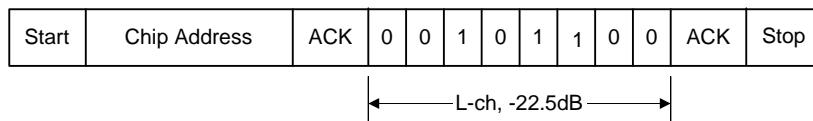

The chip entered active mode.

Set gain of 2 channel at 0dB. Volume control code = 1BH.

Set attenuation of left channel at -22.5dB. Volume control code = 2CH.

Set attenuation of right channel at -22.5dB. Volume control code = 4CH.

Start	Chip Address	ACK	0	1	0	0	1	1	0	0	ACK	Stop
← R-ch, -22.5dB →												

Preparation for power off. Code = 82H or 83H.

Start	Chip Address	ACK	1	0	0	0	0	0	1	x	ACK	Stop
← Power Off Preparation = 1 →												

FM application. OPamp active, HP active. DAC inactive, DAC mute off. Code = 65H.  
The chip enters line-in mode.

Start	Chip Address	ACK	0	1	1	0	0	1	0	1	ACK	Stop
← HPPD = 0 OPamp = 0 →												

Power down mode (shut down mode). Code = 6FH

The chip enters power down mode. The shut down current is approximately 11uA.

Start	Chip Address	ACK	0	1	1	0	1	1	1	1	ACK	Stop
← DACM = 1 DACPD = 1 HPPD = 1 OPamp = 1 →												

## SPI BUS INTERFACE

In SPI mode, SCL is serial clock, SDA is serial data and AO/CS latches the data word into the MS6334. A control word consist of 16bit, starting with the MSB. The data bits are latched on the rising edge of SCL. A rising edge of AO/CS latches the data into the MS6334 after sixteenth rising clock edge.

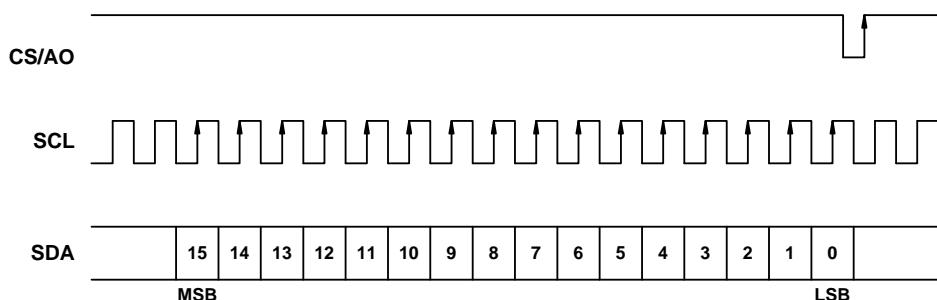

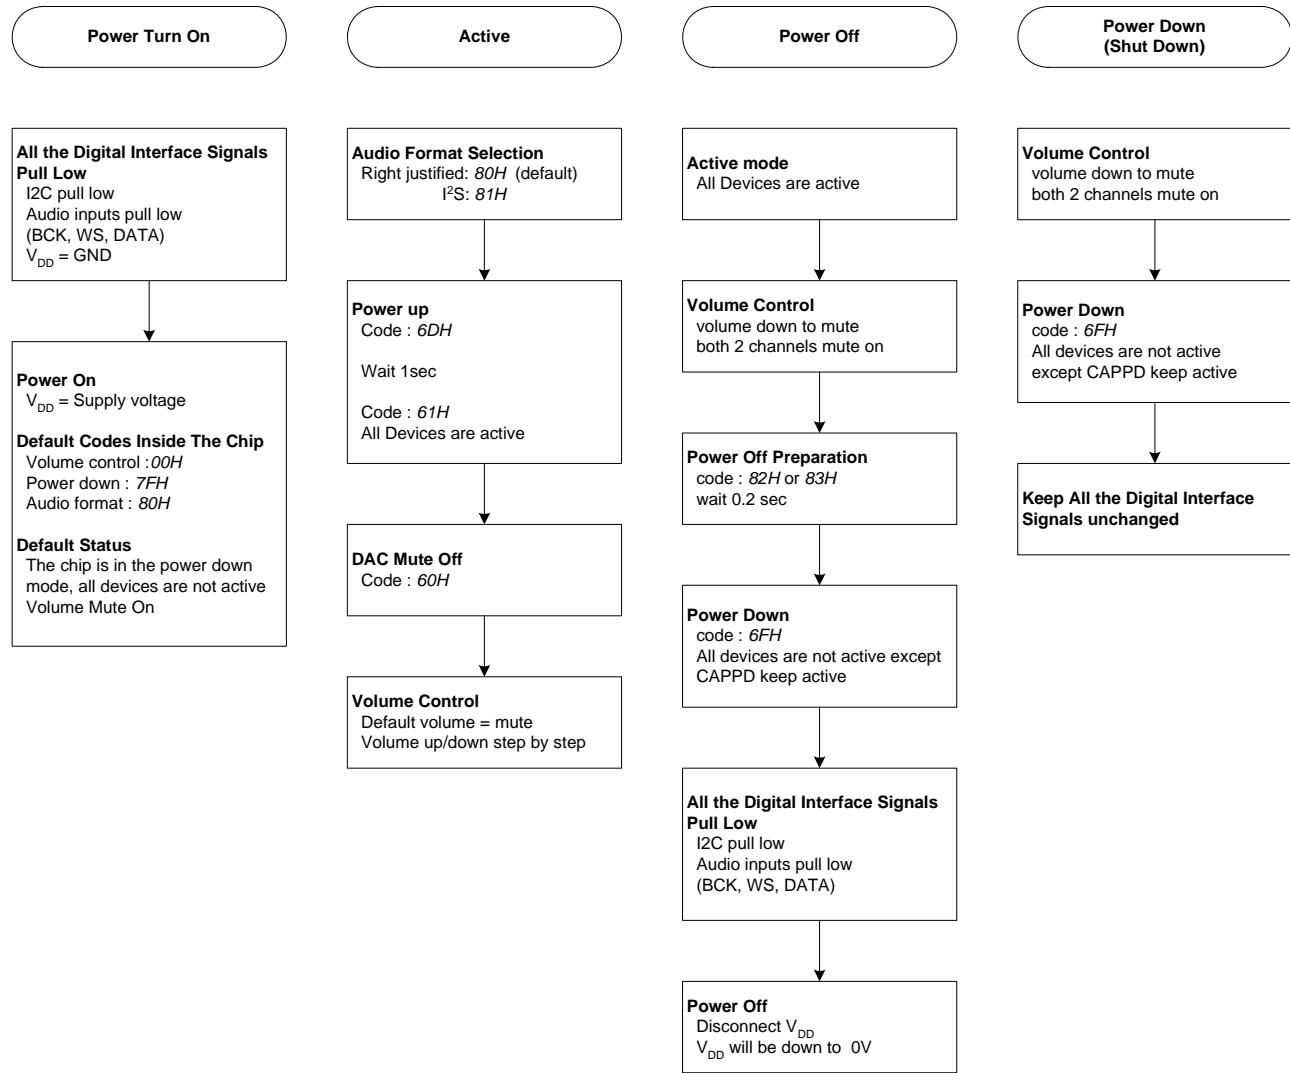

Fig.5 SPI format

**OPERATION PROCEDURE**

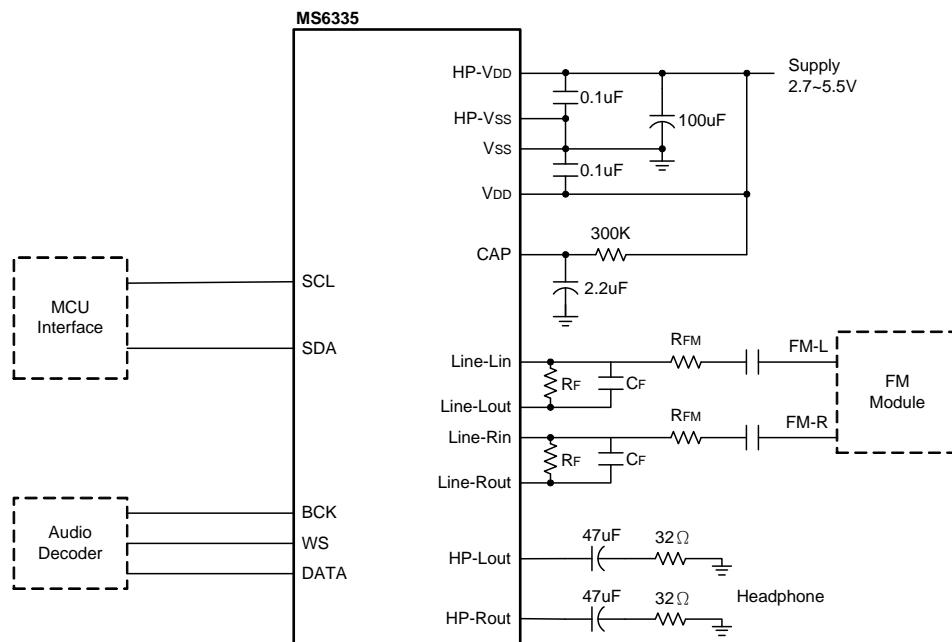

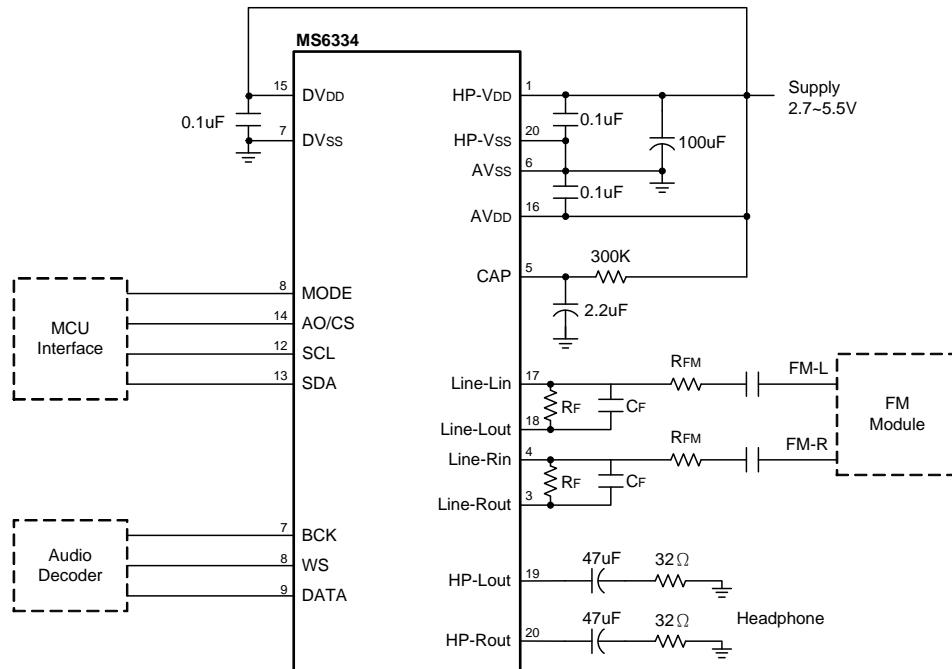

The sequence of operation: power on → active → power down → active → power off. The basic flowcharts are as follows:

**Fig.6 Operational procedure**

## APPLICATION INFORMATION

## A MP3 with FM application

The analog and digital power can be supplied as single voltage.

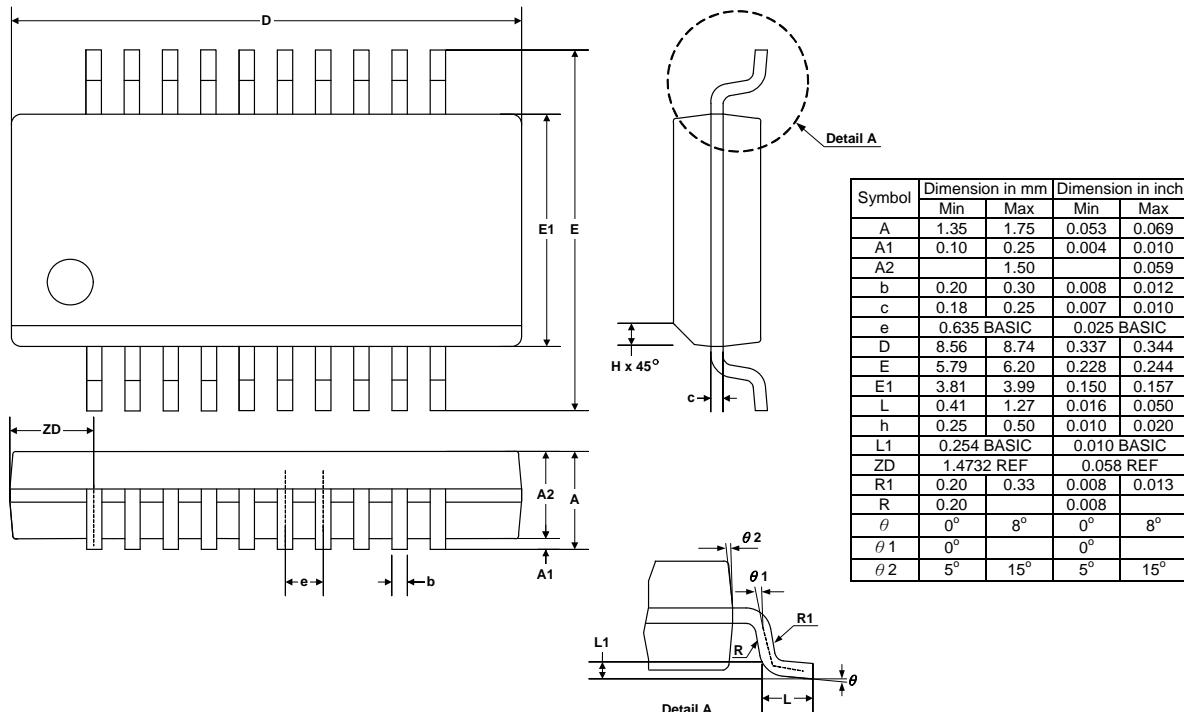

Note :  $V_o = 0.02269 * R_F * V_{DD} V_{pp}$  at 0dB gain  
 $R_F // C_F$  to decide -3dB point  
For  $V_{DD} = 3V$ ,  $R_L = 32\Omega$ ,  $R_F = 24k$ ,  $C_F = 390pF$ ,  $V_o = 1.63V_{pp}$   
 $R_L = 16\Omega$ ,  $R_F = 22k$ ,  $C_F = 470pF$ ,  $V_o = 1.50V_{pp}$   
FM mode,  $V_{Line}$  DC Gain =  $R_F / R_{FM}$

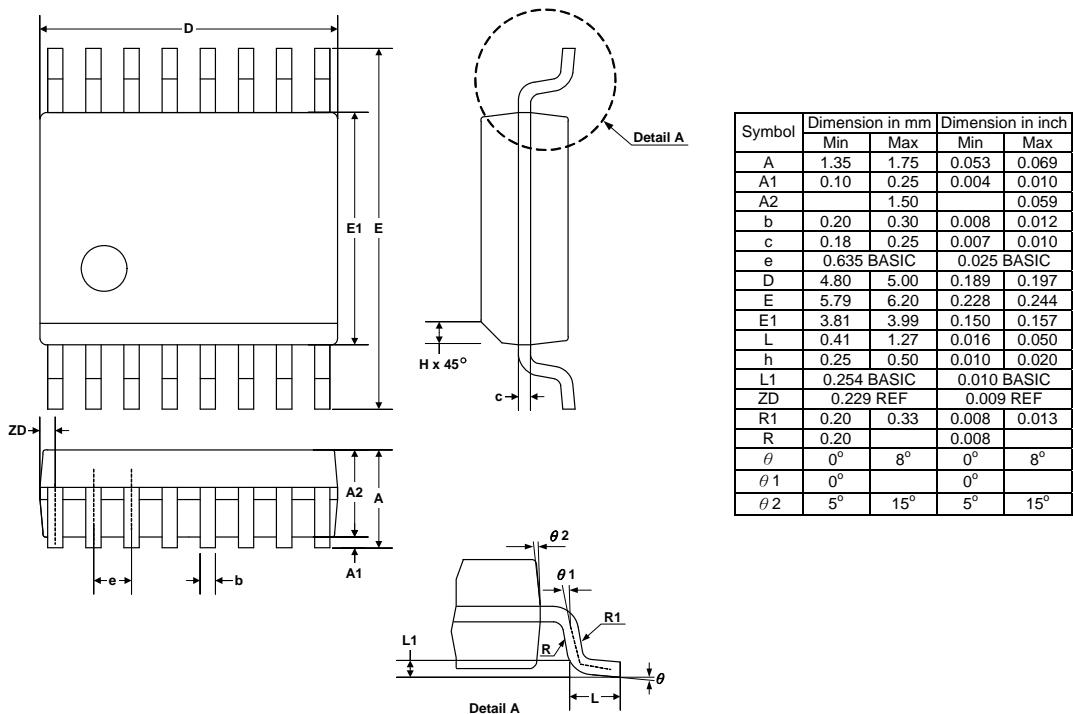

Fig.7 MP3 with FM application circuit.

## EXTERNAL DIMENSIONS

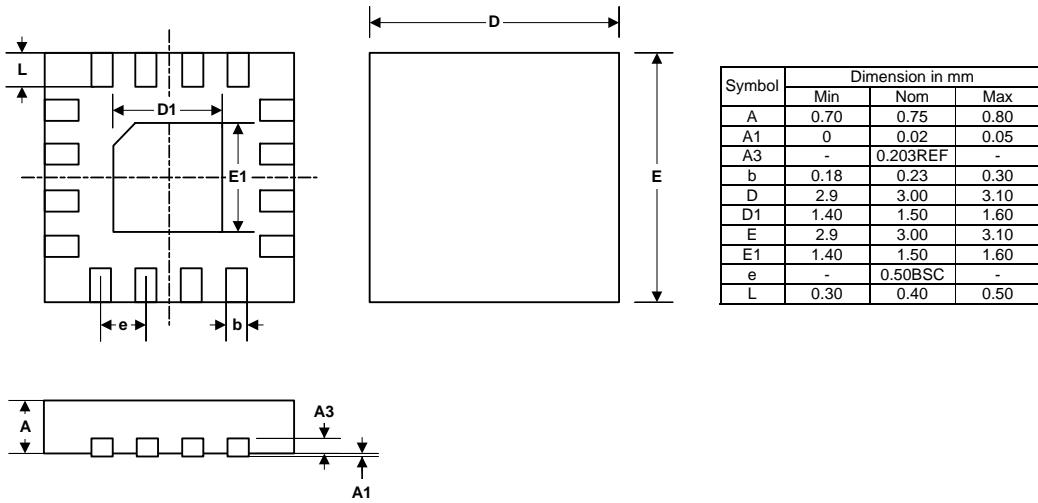

## SSOP20

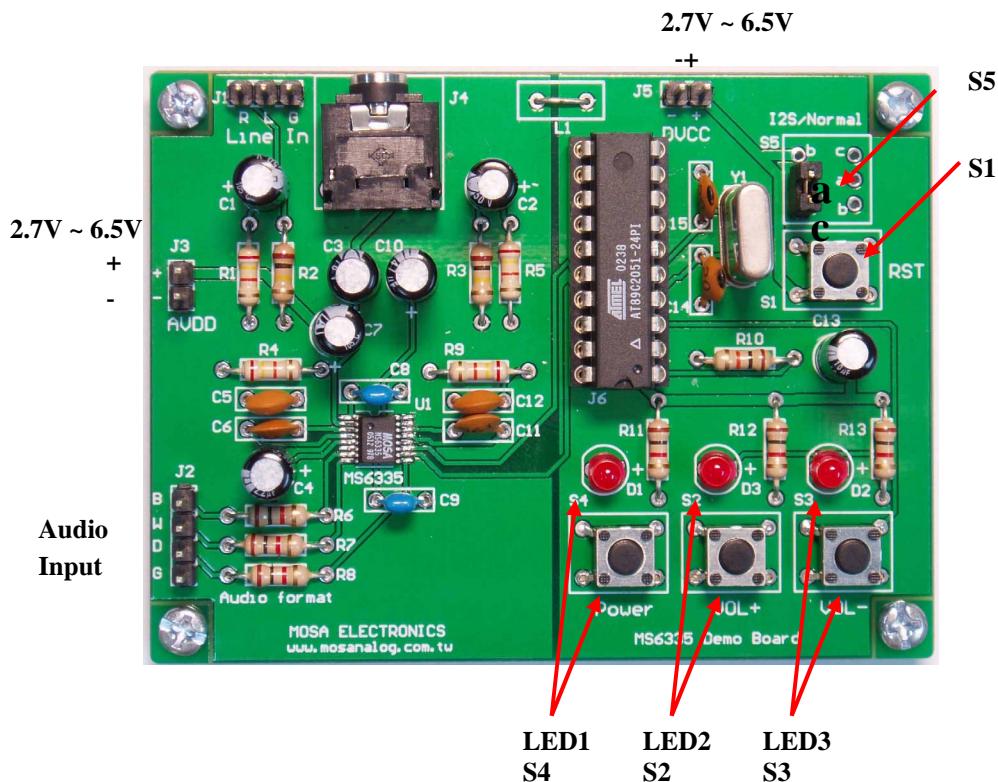

## SSOP16

## QFN16 (3x3mm)

## DEMO BOARD

**S4 (Power): POWER On/Off**

Power On: If this key is pressed until the LED1 power on (about 3 sec), then system is Power On.  
 Power Off: If this key is pressed until the LED1 power off (about 3 sec), then system is Power Off.

**S2 (UP) & S3 (Down): Volume Control**

The volume key is used to adjust the volume of playing, and the segment is divided to 31 levels (-39dB ~ +6dB).  
 The prime value is level 5 (-33dB).  
 Express full volume when LED3 is bright continuously.  
 Express mute on when LED2 is bright continuously.

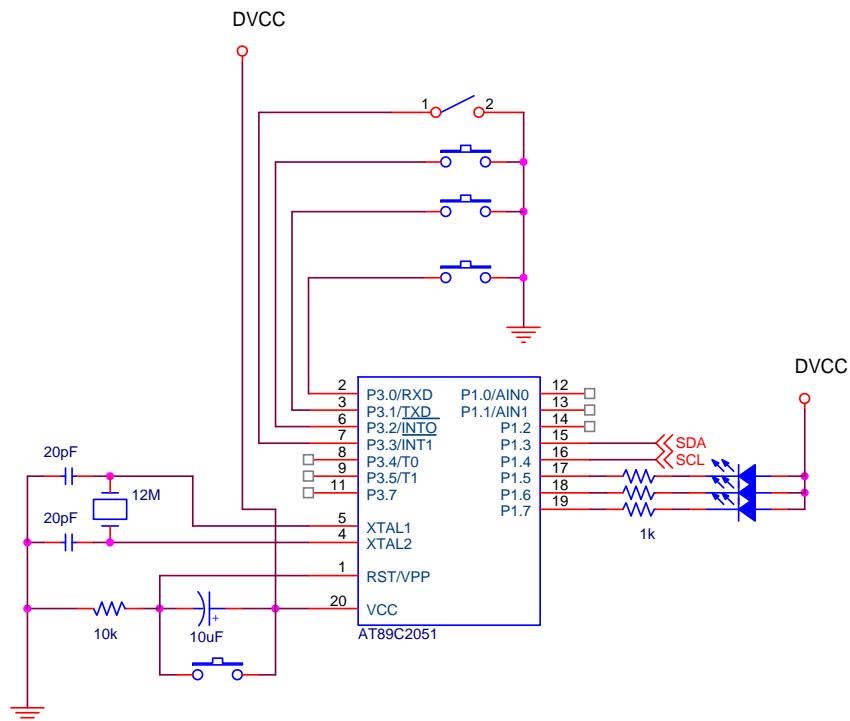

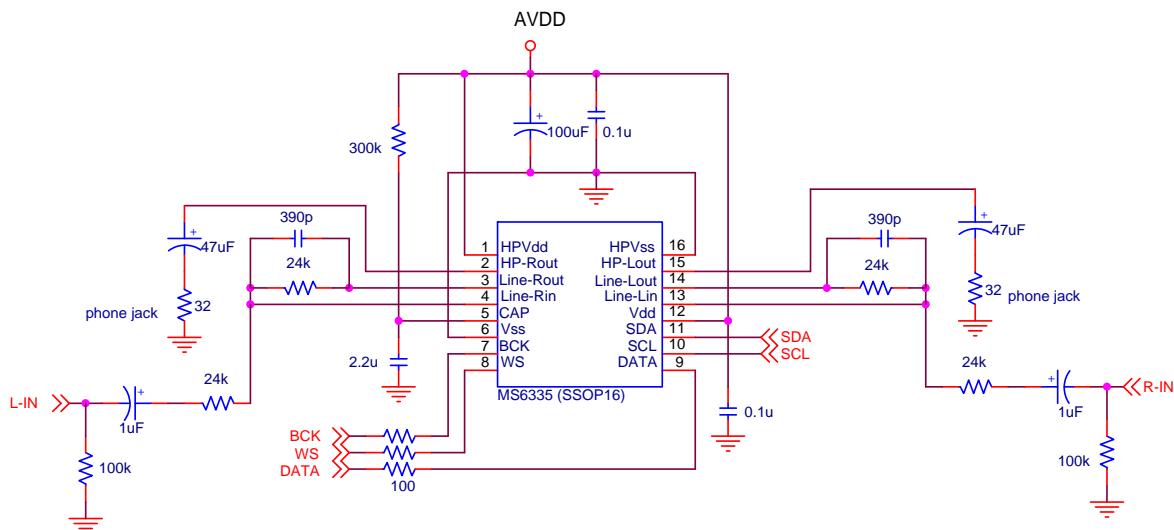

**S1: Reset**

All I/O pins are reset to high.

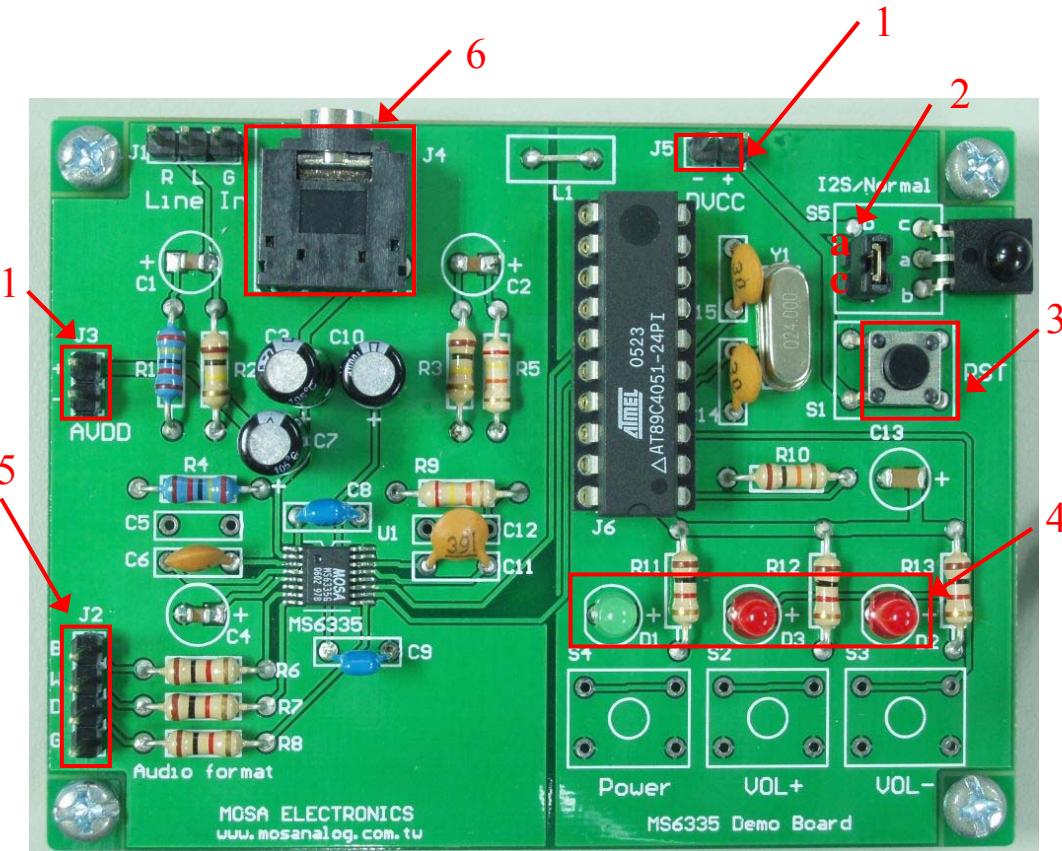

**S5: I<sup>2</sup>S/Normal**

This PIN is used to switch the mode of audio format.  
 I<sup>2</sup>S : a & c open.  
 Normal : a & c short.

## Circuit :

## DEMO BOARD (IR)

## Function description

Label 1: Supply Input

Supply voltage range is 2.4V to 6.5V.

Label 2: This PIN is used to switch the mode of audio format.

I<sup>2</sup>S : a & c open.

Normal : a &amp; c short.

Label 3: Reset

All I/O pins are reset to default values.

Label 4: LED

The LED indicates IR received status and power status.

Label 5: Digital Signal Input

Connected to digital audio formats as I2S, Right Justified and Left Justified.

Label 6: Headphone Jack

Used 3.5mm diameter of headphone with 32ohm

## IR Controller

## MS6335

16bit Stereo Audio DAC integrated HP with VC

**Power ON/OFF :** The power key.

Press the key once to set power-on or power-off for MS6864.

The default values are ATTENUATION -33dB.

**vol+ :** The volume-up switch for stereo channel

The volume increase by +1dB as the switch is pressed once, the maximum value is up to +6dB.

The default value is -33dB on initial status.

L-channel and R-channel are active synchronic.

**vol- :** The volume-down switch for stereo channel

The volume decrease by -1dB as the switch is pressed once, the minimum value is up to -39dB.

L-channel and R-channel are active synchronic.

**Vol\_L+ :** The volume-up switch for left channel

The volume increase by +1dB as the switch is pressed once, the maximum value is up to +6dB.

**Vol\_L- :** The volume-down switch for left channel

The volume decrease by -1dB as the switch is pressed once, the minimum value is up to -39dB.

**Vol\_R+ :** The volume-up switch for right channel

The volume increase by +1dB as the switch is pressed once, the maximum value is up to +6dB.

**Vol\_R- :** The volume-down switch for right channel

The volume decrease by -1dB as the switch is pressed once, the minimum value is up to -39dB.

**Mute :** Press the switch once to enter mute-on or mute-off.

The default status is mute-off on initial status.

## Circuit
