

G Series

High Performance RFI Filters
for Switching Power Supply

UL Recognized
CSA Certified
VDE Approved

G Series

The G series RFI filters are designed to provide excellent common-mode and differential-mode attenuation for most digital electronic equipment (particularly switching power supplies) over the frequency range of 20kHz to 30MHz.

These filters are a size- and cost-effective solution for equipment that must meet the conducted emission limits of EN55022 Level A requirements, as well as FCC Part 15J, Class B.

The EG models also meet the very low leakage current requirements of SEV and VDE portable equipment as well as (120 volt) UL 544 nonpatient medical equipment.
