### 1. Features

**Cosmo's high power LED packages** can handle up to 350-500mA DC current, and available in 625nm, 525nm, and 470nm wavelength in mono or multiple colors. These packages are formed by bonding 3 pcs LED chips on a 20mmx20mm metal PCB. A heat sink is mechanically screwed to the board to cool down metal surface temperature below 70 °C. The main features of these packages are as follows :

- Very high flux output per LED.
- Flat PCB package. On each PCB, the quantity of LED being adjustable from 1 to 3 to meet user's need. These LEDs being connected in series.
- Very long operation life time up to 100k hours attainable, by using a proper heat sink.
- 120±10° cool beam in most packages.

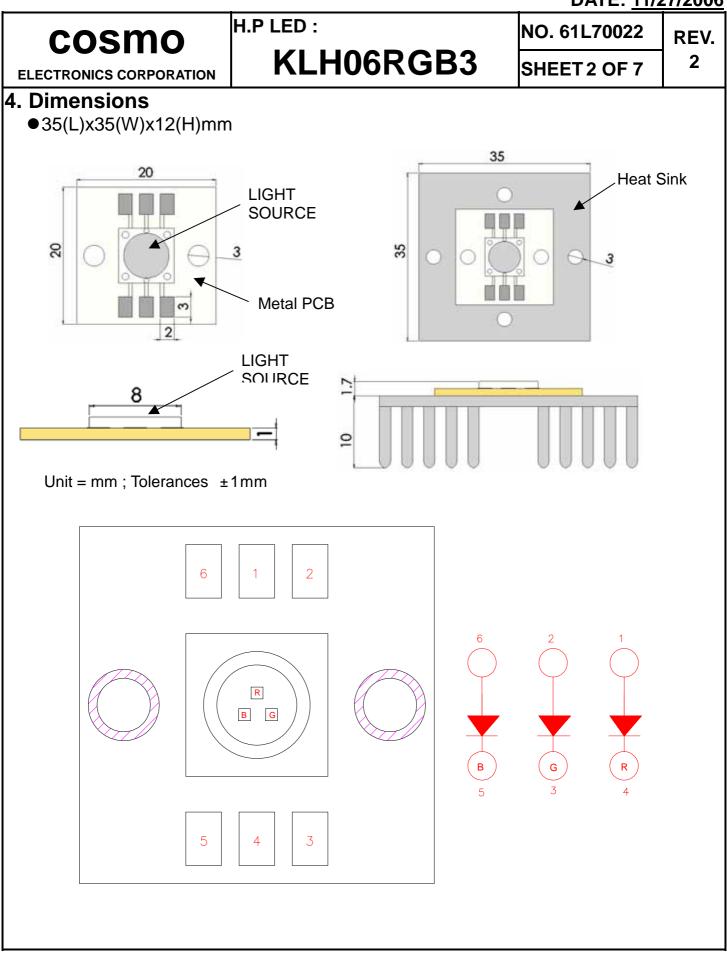

### 2. Applications

- Outdoor and indoor architectural lighting
- Reading light (car/bus/aircraft)
- Decorative/entertainment lighting
- Bollards/Security/Garden lighting
- Traffic signal
- Portable lighting (flashlight/bicycle)
- Edge-lit signs (exit sign/point of sales)
- LCD backlights
- Light guide

## 3. Operation and Storage Temperature

Parameter	Symbol	Value	Unit
Operation temperature	Topr	(Data to be ready, -30~+85)	°C
Storage temperature	Tstg	(Data to be ready, -40~+110)	°C

## 5. Electrical & Optical Characteristics

At Ta =  $25^{\circ}$ C

Parameter		Symbol	PART NO	Min.	Тур.	Max.	Unit	Test Condition	
Luminous Intensity	Ultra Red	lv	KLH06RGB3	20	25	-		IF = 350mA	
	Green			40	45	-	Lm	Note 1	
	Blue			5	10	-			
Viewing Angle		2 1/2	Ultra Red/ Blue/Green	-	120	-	deg	Note 2	
Dominant Wavelength		d	Ultra Red	-	624	-		IF = 350mA Note 3	
			Green	-	525	-	nm		
			Blue	-	468	-			
Spectral Line Half-Width			Ultra Red	-	20	-		-	
			Green	-	35	-	nm		
			Blue	-	30	-			
Forward Voltage		VF	Ultra Red	-	2.2	2.6		IF = 350mA	
			Green	-	3.5	4.2	V		
			Blue	-	3.5	4.2			
Reverse Current		Ir	Ultra Red/ Blue/Green	-	-	100	μΑ	VR = 5V	

Note :

1. Luminous intensity is measured with a photo detector and filter combination that follows the CIE ete - response curve. And the equipment measured luminous intensity torellance is ±5%.

2.  $\theta$ 1/2 is the off - axis angle at which the luminous intensity is half the axial luminous intensity.

- 3. The dominant wavelength,  $\lambda d$  is derived from the CIE chromaticity diagram and represents the color of the device.
- 4. Caution in ESD:

Static Electricity maybe cause damages to the LED. It is recommend to use a wrist band or anti - electrostatic glove when handing the LED.

All devices, equipment and machinery must be properly grounded.
